

The Newton Membrane Recycling Service
Every year the waterproofing industry sends hundreds of tonnes of plastic membrane offcuts to landfill, as there was no service capable of collecting and recycling the material.
In direct response to this, Newton Waterproofing has therefore developed the Newton Membrane Recycling Service.

Available through Newton Specialist Basement Contractors, the service is entirely traceable and 'closed-loop', as the recycled product is used to manufacture new products for the construction industry.

The Newton Membrane Recycling Service is the first scheme of its kind in the UK, and has recycled over 3 tonnes of material since it was launched in 2017.

CONSTRUCTION WORKERS GET CHARGED.....

Transformer and 110 Volt junction box manufacture Site Power UK has just signed a 10 year agreement with the inventor and UK patent holder John James Philpott (Western-Super-Mare) to fit USB fast charge ports to their wide range of building site transformers and 110volt junction boxes. In the UK, construction worker's power tools run on 110Volts, higher voltages are not allowed on Health and Safety grounds.

Ashley Ricketts – Managing Director of Site Power UK knows that a flat battery when you need to phone love ones or order urgent building supplies can be really frustrating, even those lucky enough to own an I-PHONE X can keep it charged off one of our construction site USB charging ports. Even large tablets can be charged, the USB's are the very latest style. The licence allows for us to put USB charging ports on any 110 Volt site equipment.

These construction site transformers and 110volt junction boxes are available direct from the manufacture, no charge is made for the charger - no pun intended! www.sitepoweruk.com

Elite Stone Gallery - First London Premises For Leading Italian Marble Company

On November 1st 2017 Tetyana Kovalenko, CEO of Elite Stone, opened her first London showroom, Elite Stone Gallery, a 200 square metre space for customers to choose marble and onyx, a showcase for their infinite possibilities. The gallery is in partnership with the famous Borghini quarry in Carrara, renowned for their white and blue grey marble, chosen by Michelangelo for his David.

Projects from Elite Stone (HQ near Verona) include a 3,500 square metre backlit wall at the Mariinsky Theatre, St Petersburg, 50 St James Hotel in London, a magnificent basement spa area in Surrey, villas in Como and Majorca, the Waldorf Astoria Jerusalem Hotel.

Designing For Lives Well Lived

*Can life really be better by design?
We think so.*

Design is all about imagination and logic. It's about balancing beauty with utility, and fusing tradition with innovation. Good design goes one step further though. It pushes the boundaries into the realm of 'so much more'. Good design is intuitive. It listens, it understands, and it responds. It thinks beyond the pragmatic and instead focuses on creating spaces that are inspiring and joyful.

That's what we believe in. We devise rooms that are elegant and organised, but never untouchable. Our houses should be living, breathing homes that smile at, not shirk from, all the stuff that comes with chaos of family life. We may obsess about the precise angle of a table's leg, but we then celebrate how it stands in a room that's lived in and loved. This is furniture that's as good-looking as it is hard-working. And everything is designed to get better with time. We like to think we're creating heirlooms of the future.

Think and thought drives us. In making and in doing. We even think about thinking. We aim high, we commit fully and we challenge ourselves to do better, but always with at least one foot on the ground, and always with the

customer as our mentor and muse.

And perhaps the most wonderful element of all of this is that by creating pieces that work hard, and designs that go further than function, our homes can keep pace with the race that is modern day life. Then watch. The lives inside of it actually end up slowing down, opening up pockets of otherwise lost time to spend with those we love the most. Modern, fast-paced thinking seems to allow enriched, slow living.

At Neptune, we believe that simple is beautiful. That working with the best materials is fundamental. That living through our designs as we draw them is what makes us special. We believe that our homes should make us feel refreshed and recharged, restoring us to the best version of the person we're meant to be. They should make us happy.

Neptune. Designing for lives well lived.
